5.3. SPIRE Level-1 Products

5.3.1. SPIRE Product Level 1 - Photometer Scan Product

<i>product (type="PSP", description="Photometer Scan Product")</i>	
<i>Metada- ta</i>	
StringParameter	telescope (description="Name of telescope")
StringParameter	instrument (description="Instrument attached to this product")
StringParameter	subsystem (description="Instrument Subsystem")
StringParameter	source (description="TM source packet name")
StringParameter	creator (description="Generator of this product")

StringParameter	object (description="Target name")
StringParameter	observer (description="Observer name")
StringParameter	proposal (description="Proposal name")
LongParameter	obsid (description="Observation identifier")
LongParameter	odNumber (description="Operational day number")
DateParameter	creationDate (description="Creation date of this product")
DateParameter	startDate (description="Start date of this product")
DateParameter	endDate (description="End date of this product")
StringParameter	aot (description="AOT Identifier")
StringParameter	aorLabel (description="AOR Label as entered in HSpot")
StringParameter	cusMode (description="CUS observation mode")
StringParameter	instMode (description="Instrument Mode")
StringParameter	obsMode (description="Observation mode name")
StringParameter	pointingMode (description="Pointing mode")
StringParameter	biasMode (description="Bias mode")
DoubleParameter	biasFreq (description="Bias frequency", quantity="Hz")
StringParameter	elecSide (description="Electronic side", quantity="Hz")
StringParameter	modelName (description="Model name attached to this product", quantity="Hz")
StringParameter	formatVersion (description="Version of product format", quantity="Hz")
StringParameter	missionConfig (description="Mission configuration", quantity="Hz")
DoubleParameter	equinox (description="Equinox of celestial coordinate system", quantity="Hz")
StringParameter	raDeSys (description="Coordinate reference frame for the RA and DEC", quantity="Hz")
DoubleParameter	ra (description="Actual Right Ascension of pointing", quantity="deg")
DoubleParameter	raNominal (description="Requested Right Ascension of pointing", quantity="deg")

DoubleParameter	dec (description="Actual Declination of pointing", quantity="deg")
DoubleParameter	decNominal (description="Requested Declination of pointing", quantity="deg")
DoubleParameter	posAngle (description="Position Angle of pointing", quantity="deg")
DoubleParameter	pmRA (description="Target's proper motion RA (arcsec/yr) as given by the observer", quantity="arcsec/year")
DoubleParameter	pmDEC (description="Target's proper motion Dec (arcsec/yr) as given by the observer", quantity="arcsec/year")
StringParameter	origin (description="Site that created the product", quantity="arcsec/year")
StringParameter	type (description="Product Type Identification", quantity="arcsec/year")
StringParameter	description (description="Name of this product", quantity="arcsec/year")
StringParameter	engConvCalVersion (description="Version of the calibration tree used in engineering conversion", quantity="arcsec/year")
StringParameter	calVersion (description="Calibration version", quantity="arcsec/year")
StringParameter	level (description="The level of the product", quantity="arcsec/year")
LongParameter	bbid (description="Building Block Identifier", quantity="arcsec/year")
StringParameter	bbTypeName (description="Building block type name", quantity="arcsec/year")
StringParameter	signalTable (description="Name of the signal table", quantity="arcsec/year")
LongParameter	maskDead (description="Mask value for dead channel", quantity="arcsec/year")
LongParameter	maskMaster (description="Mask value for master bit", quantity="arcsec/year")
LongParameter	maskNoisy (description="Mask value for noisy channel", quantity="arcsec/year")
LongParameter	maskSlow (description="Mask value for slow channel", quantity="arcsec/year")
BooleanParameter	adcErrFlag (description="Flag for presence of ADC Latch errors", quantity="arcsec/year")
DoubleParameter	ratioTruncatedPLW (description="Maximum ratio of out of range values to total number of values in PLW data.", quantity="arcsec/year")
DoubleParameter	ratioTruncatedPMW (description="Maximum ratio of out of range values to total number of values in PMW data.", quantity="arcsec/year")
DoubleParameter	ratioTruncatedPSW (description="Maximum ratio of out of range values to total number of values in PSW data.", quantity="arcsec/year")
DoubleParameter	ratioTruncatedPTC (description="Total fraction of out of range values for PTC", quantity="arcsec/year")
LongParameter	maskAdcLatch (description="Mask value for possible ADC latchup error", quantity="arcsec/year")

LongParameter	maskTruncated (description="Mask value for ADC conversion truncation", quantity="arcsec/year")
LongParameter	maskUncorrectedTruncation (description="Mask value for uncorrected ADC conversion truncation", quantity="arcsec/year")
DoubleParameter	ratioInvalidTimes (description="Fraction of invalid sample times", quantity="arcsec/year")
LongParameter	maskInvalidTime (description="Mask value for invalid sample time", quantity="arcsec/year")
DoubleParameter	timeOffset (description="Time offset added to correct the shift between detectors and pointing timing", quantity="s")
DoubleParameter	timeDrift (description="Time drift added to correct the shift between detectors and pointing timing", quantity="ms/min")
BooleanParameter	invalidOffsetFlag (description="If true, offsets are from a previous observation", quantity="ms/min")
BooleanParameter	rcRollApp (description="RC roll correction applied", quantity="ms/min")
DoubleParameter	subkTempDrift (description="Drift measured by the SubK temperature probe", quantity="K")
LongParameter	maskGlitchL1Detected (description="Mask value for first level glitch detected", quantity="K")
LongParameter	maskGlitchL1NotRemoved (description="Mask value for first level glitch detected and not removed", quantity="K")
DoubleParameter	ratioSamplesOutOfCalibrationRangePSW (description="Ratio of number of samples that are out of the calibrated voltage range over number of data samples in the detectors of this array", quantity="K")
LongParameter	numberBelowK3VoltagePSW (description="Number of samples measured by any detector in this array for which the voltage is less than the value of the K3 calibration parameter", quantity="K")
DoubleParameter	ratioSamplesOutOfCalibrationRangePMW (description="Ratio of number of samples that are out of the calibrated voltage range over number of data samples in the detectors of this array", quantity="K")
LongParameter	numberBelowK3VoltagePMW (description="Number of samples measured by any detector in this array for which the voltage is less than the value of the K3 calibration parameter", quantity="K")
DoubleParameter	ratioSamplesOutOfCalibrationRangePLW (description="Ratio of number of samples that are out of the calibrated voltage range over number of data samples in the detectors of this array", quantity="K")
LongParameter	numberBelowK3VoltagePLW (description="Number of samples measured by any detector in this array for which the voltage is less than the value of the K3 calibration parameter", quantity="K")
LongParameter	maskVoltageOol (description="Mask value for voltage out of fitted range", quantity="K")
LongParameter	maskVoltageBelowK3 (description="Mask value for voltage below K3", quantity="K")
LongParameter	maskNoRespData (description="Mask value for voltage out of fitted range and/or below K3", quantity="K")
DateParameter	respControlStamp (description="Control Stamp used to ensure synchronization of Flux Conversion and Temperature Drift correction tasks", quantity="K")

StringParameter	thermistorUsedInCorrectionPLW (description="Identifies Which PLW Thermistor Was Used in Correction Or If No Correction Was Done", quantity="K")
StringParameter	thermistorUsedInCorrectionPMW (description="Identifies Which PMW Thermistor Was Used in Correction Or If No Correction Was Done.", quantity="K")
StringParameter	thermistorUsedInCorrectionPSW (description="Identifies Which PSW Thermistor Was Used in Correction Or If No Correction Was Done.", quantity="K")
LongParameter	maskNotChoppedToSky (description="Mask value for channel not chopped to sky", quantity="K")
LongParameter	maskTsignalHdv (description="Mask value for thermistor/DP signal deviations are larger than expected", quantity="K")
LongParameter	maskJumpThermistorsDarksSignal (description="Mask value for signal jump in the thermistor/dark timeline", quantity="K")
LongParameter	maskNoThermistorAvailable (description="Mask value for all the available thermistors are affected by either saturation or signal jump", quantity="K")
LongParameter	maskNoDarkChannelAvailable (description="Mask value for all available dark channels in the array are affected by either saturation or signal jump", quantity="K")
StringParameter	scanDirection (description="nominal, orthogonal or scanab", quantity="K")
DoubleParameter	plwBiasAmpl (description="PLW bias amplitude", quantity="V")
DoubleParameter	pmwBiasAmpl (description="PMW bias amplitude", quantity="V")
DoubleParameter	pswBiasAmpl (description="PSW bias amplitude", quantity="V")
DoubleParameter	ptcBiasAmpl (description="PTC bias amplitude", quantity="V")
DoubleParameter	plwBiasPhase (description="PLW bias phase", quantity="rad")
DoubleParameter	pmwBiasPhase (description="PMW bias phase", quantity="rad")
DoubleParameter	pswBiasPhase (description="PSW bias phase", quantity="rad")
DoubleParameter	ptcBiasPhase (description="PTC bias phase", quantity="rad")
BooleanParameter	temperatureDriftCorrectionDone (description="Indicate the status of the temperature correction.", quantity="rad")
StringParameter	scanSpeed (description="Speed of scan", quantity="rad")
LongParameter	scanLineNum (description="Scan line number", quantity="rad")
BooleanParameter	electricalCrosstalkCorrectionDone (description="Flag set when the electrical crosstalk correction is done", quantity="rad")
DateParameter	startNominalScanLine (description="Start date of the nominal scan line", quantity="rad")
DateParameter	endNominalScanLine (description="End date of the nominal scan line", quantity="rad")
LongParameter	numberBadVoltageOffsetPLW (description="Number of PLW bolometers with bad voltage offset resets", quantity="rad")

LongParameter	numberBadVoltageOffsetPMW (description="Number of PMW bolometers with bad voltage offset resets", quantity="rad")
LongParameter	numberBadVoltageOffsetPSW (description="Number of PSW bolometers with bad voltage offset resets", quantity="rad")
BooleanParameter	coolerBurpCorrected (description="Indicate the status of the cooler burp correction.", quantity="rad")
DoubleParameter	kappa (description="Value of standard deviations to use in jump detection algorithm", quantity="rad")
BooleanParameter	fluxConversionDone (description="Indicates nominal termination of FluxConversion Task", quantity="rad")
DoubleParameter	ratioPhotFirstLevelGlitchesPSW (description="Ratio of number of flagged samples over number of data samples in the detectors of the PSW array", quantity="rad")
DoubleParameter	ratioPhotFirstLevelGlitchesPMW (description="Ratio of number of flagged samples over number of data samples in the detectors of the PMW array", quantity="rad")
DoubleParameter	ratioPhotFirstLevelGlitchesPLW (description="Ratio of number of flagged samples over number of data samples in the detectors of the PLW array", quantity="rad")
LongParameter	bsmRangeDuringScan (description="Range of the BSM motion during scan map observations", quantity="rad")

5.3.3. SPIRE Product Level 1 - Photometer Scan Product

<i>product (type="PSP", description="Photometer Scan Product")</i>	
Meta- data	
StringParameter	telescope (description="Name of telescope")
StringParameter	instrument (description="Instrument attached to this product")
StringParameter	subsystem (description="Instrument Subsystem")
StringParameter	source (description="TM source packet name")
StringParameter	creator (description="Generator of this product")
StringParameter	object (description="Target name")
StringParameter	observer (description="Observer name")
StringParameter	proposal (description="Proposal name")
LongParameter	obsid (description="Observation identifier")
LongParameter	odNumber (description="Operational day number")
DateParameter	creationDate (description="Creation date of this product")
DateParameter	startDate (description="Start date of this product")
DateParameter	endDate (description="End date of this product")
StringParameter	aot (description="AOT Identifier")
StringParameter	aorLabel (description="AOR Label as entered in HSpot")
StringParameter	cusMode (description="CUS observation mode")
StringParameter	instMode (description="Instrument Mode")
StringParameter	obsMode (description="Observation mode name")
StringParameter	pointingMode (description="Pointing mode")
StringParameter	biasMode (description="Bias mode")
DoubleParameter	biasFreq (description="Bias frequency", quantity="Hz")

StringParameter	elecSide (description="Electronic side", quantity="Hz")
StringParameter	modelName (description="Model name attached to this product", quantity="Hz")
StringParameter	formatVersion (description="Version of product format", quantity="Hz")
StringParameter	missionConfig (description="Mission configuration", quantity="Hz")
DoubleParameter	equinox (description="Equinox of celestial coordinate system", quantity="Hz")
StringParameter	raDeSys (description="Coordinate reference frame for the RA and DEC", quantity="Hz")
DoubleParameter	ra (description="Actual Right Ascension of pointing", quantity="deg")
DoubleParameter	raNominal (description="Requested Right Ascension of pointing", quantity="deg")
DoubleParameter	dec (description="Actual Declination of pointing", quantity="deg")
DoubleParameter	decNominal (description="Requested Declination of pointing", quantity="deg")
DoubleParameter	posAngle (description="Position Angle of pointing", quantity="deg")
DoubleParameter	pmRA (description="Target's proper motion RA (arcsec/yr) as given by the observer", quantity="arcsec/year")
DoubleParameter	pmDEC (description="Target's proper motion Dec (arcsec/yr) as given by the observer", quantity="arcsec/year")
StringParameter	origin (description="Site that created the product", quantity="arcsec/year")
StringParameter	type (description="Product Type Identification", quantity="arcsec/year")
StringParameter	description (description="Name of this product", quantity="arcsec/year")
StringParameter	engConvCalVersion (description="Version of the calibration tree used in engineering conversion", quantity="arcsec/year")
StringParameter	calVersion (description="Calibration version", quantity="arcsec/year")
StringParameter	level (description="The level of the product", quantity="arcsec/year")
LongParameter	bbid (description="Building Block Identifier", quantity="arcsec/year")
StringParameter	bbTypeName (description="Building block type name", quantity="arcsec/year")
StringParameter	signalTable (description="Name of the signal table", quantity="arcsec/year")
LongParameter	maskDead (description="Mask value for dead channel", quantity="arcsec/year")
LongParameter	maskMaster (description="Mask value for master bit", quantity="arcsec/year")

LongParameter	maskNoisy (description="Mask value for noisy channel", quantity="arcsec/year")
LongParameter	maskSlow (description="Mask value for slow channel", quantity="arcsec/year")
BooleanParameter	adcErrFlag (description="Flag for presence of ADC Latch errors", quantity="arcsec/year")
DoubleParameter	ratioTruncatedPLW (description="Maximum ratio of out of range values to total number of values in PLW data.", quantity="arcsec/year")
DoubleParameter	ratioTruncatedPMW (description="Maximum ratio of out of range values to total number of values in PMW data.", quantity="arcsec/year")
DoubleParameter	ratioTruncatedPSW (description="Maximum ratio of out of range values to total number of values in PSW data.", quantity="arcsec/year")
DoubleParameter	ratioTruncatedPTC (description="Total fraction of out of range values for PTC", quantity="arcsec/year")
LongParameter	maskAdcLatch (description="Mask value for possible ADC latchup error", quantity="arcsec/year")
LongParameter	maskTruncated (description="Mask value for ADC conversion truncation", quantity="arcsec/year")
LongParameter	maskUncorrectedTruncation (description="Mask value for uncorrected ADC conversion truncation", quantity="arcsec/year")
DoubleParameter	ratioInvalidTimes (description="Fraction of invalid sample times", quantity="arcsec/year")
LongParameter	maskInvalidTime (description="Mask value for invalid sample time", quantity="arcsec/year")
DoubleParameter	timeOffset (description="Time offset added to correct the shift between detectors and pointing timing", quantity="s")
DoubleParameter	timeDrift (description="Time drift added to correct the shift between detectors and pointing timing", quantity="ms/min")
BooleanParameter	invalidOffsetFlag (description="If true, offsets are from a previous observation", quantity="ms/min")
BooleanParameter	rcRollApp (description="RC roll correction applied", quantity="ms/min")
DoubleParameter	subkTempDrift (description="Drift measured by the SubK temperature probe", quantity="K")
LongParameter	maskGlitchL1Detected (description="Mask value for first level glitch detected", quantity="K")
LongParameter	maskGlitchL1NotRemoved (description="Mask value for first level glitch detected and not removed", quantity="K")
DoubleParameter	ratioSamplesOutOfCalibrationRangePSW (description="Ratio of number of samples that are out of the calibrated voltage range over number of data samples in the detectors of this array", quantity="K")
LongParameter	numberBelowK3VoltagePSW (description="Number of samples measured by any detector in this array for which the voltage is less than the value of the K3 calibration parameter", quantity="K")
DoubleParameter	ratioSamplesOutOfCalibrationRangePMW (description="Ratio of number of samples that are out of the calibrated voltage range over number of data samples in the detectors of this array", quantity="K")

LongParameter	numberBelowK3VoltagePMW (description="Number of samples measured by any detector in this array for which the voltage is less than the value of the K3 calibration parameter", quantity="K")
DoubleParameter	ratioSamplesOutOfCalibrationRangePLW (description="Ratio of number of samples that are out of the calibrated voltage range over number of data samples in the detectors of this array", quantity="K")
LongParameter	numberBelowK3VoltagePLW (description="Number of samples measured by any detector in this array for which the voltage is less than the value of the K3 calibration parameter", quantity="K")
LongParameter	maskVoltageOol (description="Mask value for voltage out of fitted range", quantity="K")
LongParameter	maskVoltageBelowK3 (description="Mask value for voltage below K3", quantity="K")
LongParameter	maskNoRespData (description="Mask value for voltage out of fitted range and/or below K3", quantity="K")
DateParameter	respControlStamp (description="Control Stamp used to ensure synchronization of Flux Conversion and Temperature Drift correction tasks", quantity="K")
StringParameter	thermistorUsedInCorrectionPLW (description="Identifies Which PLW Thermistor Was Used in Correction Or If No Correction Was Done", quantity="K")
StringParameter	thermistorUsedInCorrectionPMW (description="Identifies Which PMW Thermistor Was Used in Correction Or If No Correction Was Done.", quantity="K")
StringParameter	thermistorUsedInCorrectionPSW (description="Identifies Which PSW Thermistor Was Used in Correction Or If No Correction Was Done.", quantity="K")
LongParameter	maskNotChoppedToSky (description="Mask value for channel not chopped to sky", quantity="K")
LongParameter	maskTsignalHdv (description="Mask value for thermistor/DP signal deviations are larger than expected", quantity="K")
LongParameter	maskJumpThermistorsDarksSignal (description="Mask value for signal jump in the thermistor/dark timeline", quantity="K")
LongParameter	maskNoThermistorAvailable (description="Mask value for all the available thermistors are affected by either saturation or signal jump", quantity="K")
LongParameter	maskNoDarkChannelAvailable (description="Mask value for all available dark channels in the array are affected by either saturation or signal jump", quantity="K")
StringParameter	scanDirection (description="nominal, orthogonal or scanab", quantity="K")
DoubleParameter	plwBiasAmpl (description="PLW bias amplitude", quantity="V")
DoubleParameter	pmwBiasAmpl (description="PMW bias amplitude", quantity="V")
DoubleParameter	pswBiasAmpl (description="PSW bias amplitude", quantity="V")
DoubleParameter	ptcBiasAmpl (description="PTC bias amplitude", quantity="V")
DoubleParameter	plwBiasPhase (description="PLW bias phase", quantity="rad")
DoubleParameter	pmwBiasPhase (description="PMW bias phase", quantity="rad")
DoubleParameter	pswBiasPhase (description="PSW bias phase", quantity="rad")

DoubleParameter	ptcBiasPhase (description="PTC bias phase", quantity="rad")
BooleanParameter	temperatureDriftCorrectionDone (description="Indicate the status of the temperature correction.", quantity="rad")
StringParameter	scanSpeed (description="Speed of scan", quantity="rad")
LongParameter	scanLineNum (description="Scan line number", quantity="rad")
BooleanParameter	electricalCrosstalkCorrectionDone (description="Flag set when the electrical crosstalk correction is done", quantity="rad")
DateParameter	startNominalScanLine (description="Start date of the nominal scan line", quantity="rad")
DateParameter	endNominalScanLine (description="End date of the nominal scan line", quantity="rad")
LongParameter	numberBadVoltageOffsetPLW (description="Number of PLW bolometers with bad voltage offset resets", quantity="rad")
LongParameter	numberBadVoltageOffsetPMW (description="Number of PMW bolometers with bad voltage offset resets", quantity="rad")
LongParameter	numberBadVoltageOffsetPSW (description="Number of PSW bolometers with bad voltage offset resets", quantity="rad")
BooleanParameter	coolerBurpDetected (description="Indicates a cooler burp", quantity="rad")
BooleanParameter	coolerBurpCorrected (description="Indicate the status of the cooler burp correction.", quantity="rad")
DoubleParameter	kappa (description="Value of standard deviations to use in jump detection algorithm", quantity="rad")
BooleanParameter	fluxConversionDone (description="Indicates nominal termination of FluxConversion Task", quantity="rad")
DoubleParameter	ratioPhotFirstLevelGlitchesPSW (description="Ratio of number of flagged samples over number of data samples in the detectors of the PSW array", quantity="rad")
DoubleParameter	ratioPhotFirstLevelGlitchesPMW (description="Ratio of number of flagged samples over number of data samples in the detectors of the PMW array", quantity="rad")
DoubleParameter	ratioPhotFirstLevelGlitchesPLW (description="Ratio of number of flagged samples over number of data samples in the detectors of the PLW array", quantity="rad")
LongParameter	bsmRangeDuringScan (description="Range of the BSM motion during scan map observations", quantity="rad")

5.3.4. SPIRE Product Level 1 - Photometer Scan Product

<i>product (type="PSP", description="Photometer Scan Product")</i>	
<i>Meta- data</i>	
StringParameter	telescope (description="Name of telescope")
StringParameter	instrument (description="Instrument attached to this product")
StringParameter	subsystem (description="Instrument Subsystem")
StringParameter	source (description="TM source packet name")
StringParameter	creator (description="Generator of this product")
StringParameter	object (description="Target name")
StringParameter	observer (description="Observer name")
StringParameter	proposal (description="Proposal name")
LongParameter	obsid (description="Observation identifier")
LongParameter	odNumber (description="Operational day number")
DateParameter	creationDate (description="Creation date of this product")
DateParameter	startDate (description="Start date of this product")
DateParameter	endDate (description="End date of this product")
StringParameter	aot (description="AOT Identifier")
StringParameter	aorLabel (description="AOR Label as entered in HSpot")
StringParameter	cusMode (description="CUS observation mode")
StringParameter	instMode (description="Instrument Mode")

StringParameter	obsMode (description="Observation mode name")
StringParameter	pointingMode (description="Pointing mode")
StringParameter	biasMode (description="Bias mode")
DoubleParameter	biasFreq (description="Bias frequency", quantity="Hz")
StringParameter	elecSide (description="Electronic side", quantity="Hz")
StringParameter	modelName (description="Model name attached to this product", quantity="Hz")
StringParameter	formatVersion (description="Version of product format", quantity="Hz")
StringParameter	missionConfig (description="Mission configuration", quantity="Hz")
DoubleParameter	equinox (description="Equinox of celestial coordinate system", quantity="Hz")
StringParameter	raDeSys (description="Coordinate reference frame for the RA and DEC", quantity="Hz")
DoubleParameter	ra (description="Actual Right Ascension of pointing", quantity="deg")
DoubleParameter	raNominal (description="Requested Right Ascension of pointing", quantity="deg")
DoubleParameter	dec (description="Actual Declination of pointing", quantity="deg")
DoubleParameter	decNominal (description="Requested Declination of pointing", quantity="deg")
DoubleParameter	posAngle (description="Position Angle of pointing", quantity="deg")
DoubleParameter	pmRA (description="Target's proper motion RA (arcsec/yr) as given by the observer", quantity="arcsec/year")
DoubleParameter	pmDEC (description="Target's proper motion Dec (arcsec/yr) as given by the observer", quantity="arcsec/year")
StringParameter	origin (description="Site that created the product", quantity="arcsec/year")
StringParameter	type (description="Product Type Identification", quantity="arcsec/year")
StringParameter	description (description="Name of this product", quantity="arcsec/year")
StringParameter	engConvCalVersion (description="Version of the calibration tree used in engineering conversion", quantity="arcsec/year")
StringParameter	calVersion (description="Calibration version", quantity="arcsec/year")
StringParameter	level (description="The level of the product", quantity="arcsec/year")
LongParameter	bbid (description="Building Block Identifier", quantity="arcsec/year")

StringParameter	bbTypeName (description="Building block type name", quantity="arcsec/year")
StringParameter	signalTable (description="Name of the signal table", quantity="arcsec/year")
LongParameter	maskDead (description="Mask value for dead channel", quantity="arcsec/year")
LongParameter	maskMaster (description="Mask value for master bit", quantity="arcsec/year")
LongParameter	maskNoisy (description="Mask value for noisy channel", quantity="arcsec/year")
LongParameter	maskSlow (description="Mask value for slow channel", quantity="arcsec/year")
BooleanParameter	adcErrFlag (description="Flag for presence of ADC Latch errors", quantity="arcsec/year")
DoubleParameter	ratioTruncatedPLW (description="Maximum ratio of out of range values to total number of values in PLW data.", quantity="arcsec/year")
DoubleParameter	ratioTruncatedPMW (description="Maximum ratio of out of range values to total number of values in PMW data.", quantity="arcsec/year")
DoubleParameter	ratioTruncatedPSW (description="Maximum ratio of out of range values to total number of values in PSW data.", quantity="arcsec/year")
DoubleParameter	ratioTruncatedPTC (description="Total fraction of out of range values for PTC", quantity="arcsec/year")
LongParameter	maskAdcLatch (description="Mask value for possible ADC latchup error", quantity="arcsec/year")
LongParameter	maskTruncated (description="Mask value for ADC conversion truncation", quantity="arcsec/year")
LongParameter	maskUncorrectedTruncation (description="Mask value for uncorrected ADC conversion truncation", quantity="arcsec/year")
DoubleParameter	ratioInvalidTimes (description="Fraction of invalid sample times", quantity="arcsec/year")
LongParameter	maskInvalidTime (description="Mask value for invalid sample time", quantity="arcsec/year")
DoubleParameter	timeOffset (description="Time offset added to correct the shift between detectors and pointing timing", quantity="s")
DoubleParameter	timeDrift (description="Time drift added to correct the shift between detectors and pointing timing", quantity="ms/min")
BooleanParameter	invalidOffsetFlag (description="If true, offsets are from a previous observation", quantity="ms/min")
BooleanParameter	rcRollApp (description="RC roll correction applied", quantity="ms/min")
DoubleParameter	subkTempDrift (description="Drift measured by the SubK temperature probe", quantity="K")
LongParameter	maskGlitchL1Detected (description="Mask value for first level glitch detected", quantity="K")
LongParameter	maskGlitchL1NotRemoved (description="Mask value for first level glitch detected and not removed", quantity="K")
DoubleParameter	ratioSamplesOutOfCalibrationRangePSW (description="Ratio of number of samples that are out of the calibrated voltage range over number of data samples in the detectors of this array", quantity="K")

LongParameter	numberBelowK3VoltagePSW (description="Number of samples measured by any detector in this array for which the voltage is less than the value of the K3 calibration parameter", quantity="K")
DoubleParameter	ratioSamplesOutOfCalibrationRangePMW (description="Ratio of number of samples that are out of the calibrated voltage range over number of data samples in the detectors of this array", quantity="K")
LongParameter	numberBelowK3VoltagePMW (description="Number of samples measured by any detector in this array for which the voltage is less than the value of the K3 calibration parameter", quantity="K")
DoubleParameter	ratioSamplesOutOfCalibrationRangePLW (description="Ratio of number of samples that are out of the calibrated voltage range over number of data samples in the detectors of this array", quantity="K")
LongParameter	numberBelowK3VoltagePLW (description="Number of samples measured by any detector in this array for which the voltage is less than the value of the K3 calibration parameter", quantity="K")
LongParameter	maskVoltageOol (description="Mask value for voltage out of fitted range", quantity="K")
LongParameter	maskVoltageBelowK3 (description="Mask value for voltage below K3", quantity="K")
LongParameter	maskNoRespData (description="Mask value for voltage out of fitted range and/or below K3", quantity="K")
DateParameter	respControlStamp (description="Control Stamp used to ensure synchronization of Flux Conversion and Temperature Drift correction tasks", quantity="K")
StringParameter	thermistorUsedInCorrectionPLW (description="Identifies Which PLW Thermistor Was Used in Correction Or If No Correction Was Done", quantity="K")
StringParameter	thermistorUsedInCorrectionPMW (description="Identifies Which PMW Thermistor Was Used in Correction Or If No Correction Was Done.", quantity="K")
StringParameter	thermistorUsedInCorrectionPSW (description="Identifies Which PSW Thermistor Was Used in Correction Or If No Correction Was Done.", quantity="K")
LongParameter	maskNotChoppedToSky (description="Mask value for channel not chopped to sky", quantity="K")
LongParameter	maskTsignalHdv (description="Mask value for thermistor/DP signal deviations are larger than expected", quantity="K")
LongParameter	maskJumpThermistorsDarksSignal (description="Mask value for signal jump in the thermistor/dark timeline", quantity="K")
LongParameter	maskNoThermistorAvailable (description="Mask value for all the available thermistors are affected by either saturation or signal jump", quantity="K")
LongParameter	maskNoDarkChannelAvailable (description="Mask value for all available dark channels in the array are affected by either saturation or signal jump", quantity="K")
StringParameter	scanDirection (description="nominal, orthogonal or scanab", quantity="K")
DoubleParameter	plwBiasAmpl (description="PLW bias amplitude", quantity="V")
DoubleParameter	pmwBiasAmpl (description="PMW bias amplitude", quantity="V")
DoubleParameter	pswBiasAmpl (description="PSW bias amplitude", quantity="V")
DoubleParameter	ptcBiasAmpl (description="PTC bias amplitude", quantity="V")

5.3.14. SPIRE Product Level 1 - Photometer Scan Product

<i>product (type="PSP", description="Photometer Scan Product")</i>	
Meta- data	
StringParameter	telescope (description="Name of telescope")
StringParameter	instrument (description="Instrument attached to this product")
StringParameter	subsystem (description="Instrument Subsystem")
StringParameter	source (description="TM source packet name")
StringParameter	creator (description="Generator of this product")
StringParameter	object (description="Target name")
StringParameter	observer (description="Observer name")
StringParameter	proposal (description="Proposal name")
LongParameter	obsid (description="Observation identifier")
LongParameter	odNumber (description="Operational day number")
DateParameter	creationDate (description="Creation date of this product")
DateParameter	startDate (description="Start date of this product")
DateParameter	endDate (description="End date of this product")
StringParameter	aot (description="AOT Identifier")
StringParameter	aorLabel (description="AOR Label as entered in HSpot")
StringParameter	cusMode (description="CUS observation mode")
StringParameter	instMode (description="Instrument Mode")
StringParameter	obsMode (description="Observation mode name")
StringParameter	pointingMode (description="Pointing mode")
StringParameter	biasMode (description="Bias mode")
DoubleParameter	biasFreq (description="Bias frequency", quantity="Hz")

StringParameter	elecSide (description="Electronic side", quantity="Hz")
StringParameter	modelName (description="Model name attached to this product", quantity="Hz")
StringParameter	formatVersion (description="Version of product format", quantity="Hz")
StringParameter	missionConfig (description="Mission configuration", quantity="Hz")
DoubleParameter	equinox (description="Equinox of celestial coordinate system", quantity="Hz")
StringParameter	raDeSys (description="Coordinate reference frame for the RA and DEC", quantity="Hz")
DoubleParameter	ra (description="Actual Right Ascension of pointing", quantity="deg")
DoubleParameter	raNominal (description="Requested Right Ascension of pointing", quantity="deg")
DoubleParameter	dec (description="Actual Declination of pointing", quantity="deg")
DoubleParameter	decNominal (description="Requested Declination of pointing", quantity="deg")
DoubleParameter	posAngle (description="Position Angle of pointing", quantity="deg")
DoubleParameter	pmRA (description="Target's proper motion RA (arcsec/yr) as given by the observer", quantity="arcsec a-1")
DoubleParameter	pmDEC (description="Target's proper motion Dec (arcsec/yr) as given by the observer", quantity="arcsec a-1")
StringParameter	origin (description="Site that created the product", quantity="arcsec a-1")
StringParameter	type (description="Product Type Identification", quantity="arcsec a-1")
StringParameter	description (description="Name of this product", quantity="arcsec a-1")
StringParameter	engConvCalVersion (description="Version of the calibration tree used in engineering conversion", quantity="arcsec a-1")
StringParameter	calVersion (description="Calibration version", quantity="arcsec a-1")
StringParameter	level (description="The level of the product", quantity="arcsec a-1")
LongParameter	bbid (description="Building Block Identifier", quantity="arcsec a-1")
StringParameter	bbTypeName (description="Building block type name", quantity="arcsec a-1")
StringParameter	signalTable (description="Name of the signal table", quantity="arcsec a-1")
LongParameter	maskDead (description="Mask value for dead channel", quantity="arcsec a-1")
LongParameter	maskMaster (description="Mask value for master bit", quantity="arcsec a-1")

LongParameter	maskNoisy (description="Mask value for noisy channel", quantity="arcsec a-1")
LongParameter	maskSlow (description="Mask value for slow channel", quantity="arcsec a-1")
BooleanParameter	adcErrFlag (description="Flag for presence of ADC Latch errors", quantity="arcsec a-1")
DoubleParameter	ratioTruncatedPLW (description="Maximum ratio of out of range values to total number of values in PLW data.", quantity="arcsec a-1")
DoubleParameter	ratioTruncatedPMW (description="Maximum ratio of out of range values to total number of values in PMW data.", quantity="arcsec a-1")
DoubleParameter	ratioTruncatedPSW (description="Maximum ratio of out of range values to total number of values in PSW data.", quantity="arcsec a-1")
DoubleParameter	ratioTruncatedPTC (description="Total fraction of out of range values for PTC", quantity="arcsec a-1")
LongParameter	maskAdcLatch (description="Mask value for possible ADC latchup error", quantity="arcsec a-1")
LongParameter	maskTruncated (description="Mask value for ADC conversion truncation", quantity="arcsec a-1")
LongParameter	maskUncorrectedTruncation (description="Mask value for uncorrected ADC conversion truncation", quantity="arcsec a-1")
DoubleParameter	ratioInvalidTimes (description="Fraction of invalid sample times", quantity="arcsec a-1")
LongParameter	maskInvalidTime (description="Mask value for invalid sample time", quantity="arcsec a-1")
DoubleParameter	timeOffset (description="Time offset added to correct the shift between detectors and pointing timing", quantity="s")
DoubleParameter	timeDrift (description="Time drift added to correct the shift between detectors and pointing timing", quantity="ms/min")
BooleanParameter	invalidOffsetFlag (description="If true, offsets are from a previous observation", quantity="ms/min")
BooleanParameter	rcRollApp (description="RC roll correction applied", quantity="ms/min")
DoubleParameter	subkTempDrift (description="Drift measured by the SubK temperature probe", quantity="K")
LongParameter	maskGlitchL1Detected (description="Mask value for first level glitch detected", quantity="K")
LongParameter	maskGlitchL1NotRemoved (description="Mask value for first level glitch detected and not removed", quantity="K")
DoubleParameter	ratioSamplesOutOfCalibrationRangePSW (description="Ratio of number of samples that are out of the calibrated voltage range over number of data samples in the detectors of this array", quantity="K")
LongParameter	numberBelowK3VoltagePSW (description="Number of samples measured by any detector in this array for which the voltage is less than the value of the K3 calibration parameter", quantity="K")
DoubleParameter	ratioSamplesOutOfCalibrationRangePMW (description="Ratio of number of samples that are out of the calibrated voltage range over number of data samples in the detectors of this array", quantity="K")

LongParameter	numberBelowK3VoltagePMW (description="Number of samples measured by any detector in this array for which the voltage is less than the value of the K3 calibration parameter", quantity="K")
DoubleParameter	ratioSamplesOutOfCalibrationRangePLW (description="Ratio of number of samples that are out of the calibrated voltage range over number of data samples in the detectors of this array", quantity="K")
LongParameter	numberBelowK3VoltagePLW (description="Number of samples measured by any detector in this array for which the voltage is less than the value of the K3 calibration parameter", quantity="K")
LongParameter	maskVoltageOol (description="Mask value for voltage out of fitted range", quantity="K")
LongParameter	maskVoltageBelowK3 (description="Mask value for voltage below K3", quantity="K")
LongParameter	maskNoRespData (description="Mask value for voltage out of fitted range and/or below K3", quantity="K")
DateParameter	respControlStamp (description="Control Stamp used to ensure synchronization of Flux Conversion and Temperature Drift correction tasks", quantity="K")
LongParameter	maskNotChoppedToSky (description="Mask value for channel not chopped to sky", quantity="K")
LongParameter	maskTsignalHdv (description="Mask value for thermistor/DP signal deviations are larger than expected", quantity="K")
LongParameter	maskNoThermistorAvailable (description="Mask value for all the available thermistors are affected by either saturation or signal jump", quantity="K")
LongParameter	maskNoDarkChannelAvailable (description="Mask value for all available dark channels in the array are affected by either saturation or signal jump", quantity="K")
StringParameter	scanDirection (description="nominal, orthogonal or scanab", quantity="K")
DoubleParameter	plwBiasAmpl (description="PLW bias amplitude", quantity="V")
DoubleParameter	pmwBiasAmpl (description="PMW bias amplitude", quantity="V")
DoubleParameter	pswBiasAmpl (description="PSW bias amplitude", quantity="V")
DoubleParameter	ptcBiasAmpl (description="PTC bias amplitude", quantity="V")
DoubleParameter	plwBiasPhase (description="PLW bias phase", quantity="rad")
DoubleParameter	pmwBiasPhase (description="PMW bias phase", quantity="rad")
DoubleParameter	pswBiasPhase (description="PSW bias phase", quantity="rad")
DoubleParameter	ptcBiasPhase (description="PTC bias phase", quantity="rad")

Part II. Appendices

Appendix A. Compulsory metadata keywords in Herschel scientific products

The following table lists the main Herschel metadata keywords, their description, and their expression in FITS.

Herschel Name	DP	Description	FITS-Name
aorLabel		AOR label as entered in HSpot	AOR
aot		AOT Identifier	AOT
creationDate		Date of product creation	DATE
creator		The name of the software that created the product	CREATOR
cusMode		CUS observation mode	CUSMODE
dec		Actual Declination of pointing	DEC
decNominal		requested declination of pointing	DEC_NOM
description		Full name of product	DESC
endDate		End date of observation	DATE-END
equinox		equinox of celestial coordinate system	EQUINOX
formatVersion		Version of product format	FORMATV
instrument		Instrument name	INSTRUME
level		Product level	LEVEL
missionConfig		Mission configuration	MISSIONC
naifId		SSO NAIF identifier	NAIFID
object		target name	OBJECT
observer		name of observer	OBSERVER
obsid		Observation Identifier	OBS_ID
obsMode		Observation mode name'	OBS_MODE
odNumber		operational day number	ODNUMBER
origin		site that created the product	ORIGIN
pointingMode		Pointing mode identifier	POINTMOD
posAngle		Position Angle of pointing	POSANGLE
proposal		proposal name	PROPOSAL
ra		Actual Right Ascension of pointing	RA
raDeSys		Coordinate reference frame for the RA and DEC	RADESYS
raNominal		requested RA of pointing	RA_NOM
startDate		Start date of observation	DATE_OBS and DATE-OBS
telescope		Name of telescope	TELESCOP
type		Product type identification	TYPE

Appendix B. Quality flags included in the Quality Control Summary Report

Table B.1. Auxiliary quality flags.

FITS keyword	Description
RADECDF	RA, DEC discrepancy
RADECACC	RA, DEC accuracy
WARMBETA	Warning: observation at warm beta angle
WBETA4	Warning: observation immediately preceded by 4-hours warm beta period
WBETA10	Warning: observation preceded by 10-hours warm beta period
GYRATTSP	Suspicious quality of the attitude reconstruction.

Table B.2. HIFI Class 1 flags: indicate that the data is partially or totally unusable for science.

FITS keyword	Description
CMDFAIL	Max number of command acceptance or execution failures found in the telemetry
FASTQDC	Fast Quantization Distortion Correction processed. Not optimal
HOTCOLD	Data measured from hot and cold loads not sufficient for hot/cold calibration
HRSASIC	One or more ASICs configuration problems in HRS-H
HRSVASIC	One or more ASICs configuration problems in HRS-V
HSDFAIL	Failure in HifiSpectrumDataset construction
INTENCAL	Intensity calibration not or not for all spectra carried through
LOFPATT	Pattern observed for the LoFrequency not as expected in all datasets
LOUDSB	The LOU was disabled during this observation, science data are likely unusable
LOUDSB1B	LOU has been potentially deactivated for one active band
NOFRQCAL	All COMBs have failed to be fitted
NOPOWCOR	No Power Correction could be processed
NOQDC	No Quantization Distortion Correction could be processed
ONOFFPRO	More ON- than OFF-datasets found in the data - not all ON-datasets could be processed with OFF-dataset(s)
TSYSFLAG	Hot/cold calibration not successful
UNKBB	Bbtype not known

FITS keyword	Description
WRGFRQSC	At least one Science data has been affected from failing frequency calibration due to a COMB fit failure

Table B.3. HIFI Class 2 flags: refer to data that is usable for science, but that in some cases could still be affected by residual instrument artefacts.

FITS keyword	Description
ANOMLPTG	The intended and the computed pointing differ by more than three times the APE (the ratio is given in the value column)
BADPIXEL	Max number of channels marked as BAD due repeated saturations
CALERR	Problem in the calibration-tree: APE data not present in calibration tree. APE check not performed.
DARKSATR	Spectrum contains saturated dark
DECONF	The deconvolution could not be performed on at least one polarization
FPUMIXC	FPU Check: Mixer current is Out Of Limit
HEBHAPPL	Unable to apply the HEB electric standing wave correction to H polarisation
HEBVAPPL	Unable to apply the HEB electric standing wave correction to V polarisation
LESSDATA	Less data found than expected
LOTUNING	Failure in LO tuning status
LOUCUR	LO multiplier current deviates from zero, which is indicating of possible LOU impurity
LRGTHROW	The frequency throw is large compared to the HRS bandwidth
MOREDATA	More data found than expected
NOBASELN	No off baseline could be calculated
NOFFSUBS	No off baseline subtraction carried through since no off baseline data available
NOSUBST	Reference subtraction not processed - maybe identification of phases not successful
NOVELOC	No or not sufficient velocity information available
ONOFFLEN	Some ON/OFF dataset pairs found with unequal number of rows
PHASCHEC	Not all phase checks could be carried through or completed
PLTFRMNG	Platforming present in overlapping subbands
POINTFAL	Failure to associate pointing values to the spectra
RMSHV	One of the two polarisations is noisier than the other by more than $\sqrt{2}$ %. Their noise ratio is given in the value column.
RMSHVST	The noise ratio of the two polarisations exceeds that expected from the measured Tsys ratio by

FITS keyword	Description
	more than 10%. Their ratio is given in the value column.
RMSNOISE	The computed noise rms exceeds the predicted one by more than $\sqrt{2}$. Their ratio is given in the value column
SATPIXEL	Maximum number of saturated pixel detected in a single spectrum
SPUR	Spur lines detected in the cold spectra
WRONGAVG	Some data has been lost while computing the average over many datasets
ZEROINCF	Max percentage of DFs having zero values in the HRS Correlation Factors

Table B.4. HIFI Class 3 flags: refer to data that is usable for science with no particular further action

FITS keyword	Description
BADDATDC	Bad (corrupted) science data discarded
BADDATL2	Remaining bad (corrupted) science data at Level 2
BADHCDC	Bad (corrupted) hc data discarded
NWEIGHTS	Problem occurred while computing channel-dependent weights. No weights added.

Table B.5. Quality metadata for PACS

FITS keyword	Description
BSPUBUF	Blue photometer total number of SPUBuffer not expected
BSPUFAI	Percentage of blue photometer failed SPU above threshold
BSPUMIS	Percentage of blue photometer missing SPU above threshold
DMANOG1	DecMec Anomaly 70 - supply group 1 (Red band) -without data loss
DMANOG2	DecMec Anomaly 70 - supply group 2 (Red band) -without data loss
DMANOG3	DecMec Anomaly 70 - supply group 3 (Blue band) -without data loss
DMANOG4	DecMec Anomaly 70 - supply group 4 (Blue band) -without data loss
DMANOG1L	DecMec Anomaly 70 - supply group 1 (Red band) - WITH data loss
DMANOG2L	DecMec Anomaly 70 - supply group 2 (Red band) - WITH data loss
DMANOG3L	DecMec Anomaly 70 - supply group 3 (Blue band) - WITH data loss
DMANOG4L	DecMec Anomaly 70 - supply group 4 (Blue band) - WITH data loss
FSPUBLUE	Spec. Failed SPU Buffer Blue

FITS keyword	Description
FSPURED	Spec. Failed SPU Buffer Red
POINTACC	Estimate in arcsec of mean error of Pointing during observation above tolerance
POINTOFF	Mean Pointing offset in arcsec with respect to coordinates provided by proposer out of limits
POINTSTA	Percentage of observing time with Pointing accuracy above threshold
RPSPUBUF	Red photometer total numbers of SPUBuffer not expected
RSPUFAI	Percentage of red photometer failed SPU above threshold
RSPUMIS	Percentage of red photometer missing SPU above threshold
SPEEDBMP	Speed Bump(s) detected
SPGFAILB	Pipeline failed in the blue channel
SPGFAILR	Pipeline failed in the red channel

For the SPIRE instrument the assessment of the observation is given in the comment field of the Quality Control Summary Report.

Appendix C. Miscellaneous, specific or optional metadata keywords.

Table C.1. Miscellaneous, specific or optional metadata keywords.

Metadatum	FITS keyword	Description
calFileVersion	CALFILEV	Calfile version number.
m	NRASTCOL	HSPOT: no. raster cols: valid for rasters.
n	NRASTLIN	HSPOT: no. raster lines: valid for rasters.
productNotes	PRODNOTE	Product notes.
queryTime	QUERYTME	time of the database query to produce this version of the calibration file.
queryTimeAsString	QURYTMST	time of the database query to produce this version of the calibration file.
time	FINETIME	Packet time.

Appendix D. Metadata typos and duplications found in Herschel products.

Table D.1. Metadata typos and duplications in Herschel products.

Metadatum	FITS keyword	Description
Apid	APID	Application Programme Identifier duplication.
band	BAND	SLICE_INFO: spectral band (R1 B2A B B3A)
calFileVersion	CALFILEV	Typo, the right metadatum is calFileVersion.
creationDate_ILLEGAL_FORMAT	DATE	Date of product creation (obsolete date format).
Duration	EXPTIME	duration of the observation in seconds
Observing mode	OBSMODE	Observation mode name duplication (Note that the corresponding FITS keyword is non-standard as well, instead of the more common OBS_MODE).
pmDEC	PMDEC	Target's proper motion Dec (arcsec/yr).
pmRA	PMRA	Target's proper motion RA (arcsec/yr).
processingMode	PROCMODE	SPG pipeline processing mode selected.
