

ROTATING GLOBULAR CLUSTERS IN THE GAIA ERA

Alice Zocchi

ESA Research Fellow - ESTEC

FOR A LONG TIME...

Globular clusters have been described as stellar systems having:

- ◆ **simple geometry**
- ◆ **simple dynamics**
- ◆ **simple stellar population**

... BUT NOW WE KNOW BETTER!

Globular clusters
are **complex**
stellar systems:

- rotation
- pressure anisotropy
- external tidal field
- multiple populations
- black holes (stellar mass, IMBH) and other exotica
- ...

This complexity needs to
be taken into account and
to be treated properly!

... BUT NOW WE KNOW BETTER!

Globular clusters
are **complex**
stellar systems:

- **rotation**
- pressure anisotropy
- external tidal field
- multiple populations

- ...

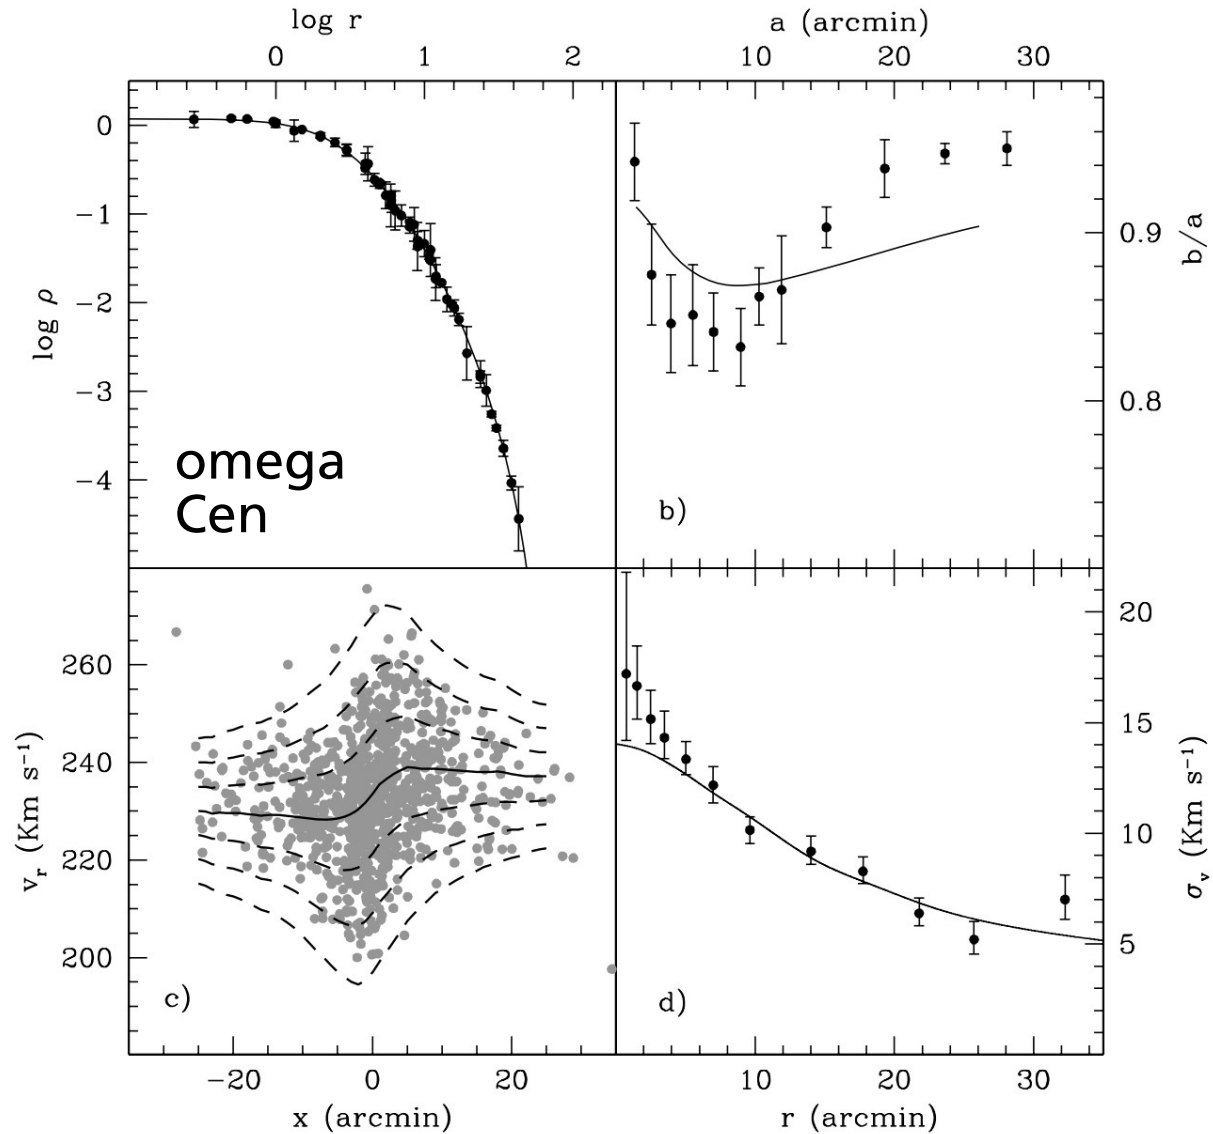

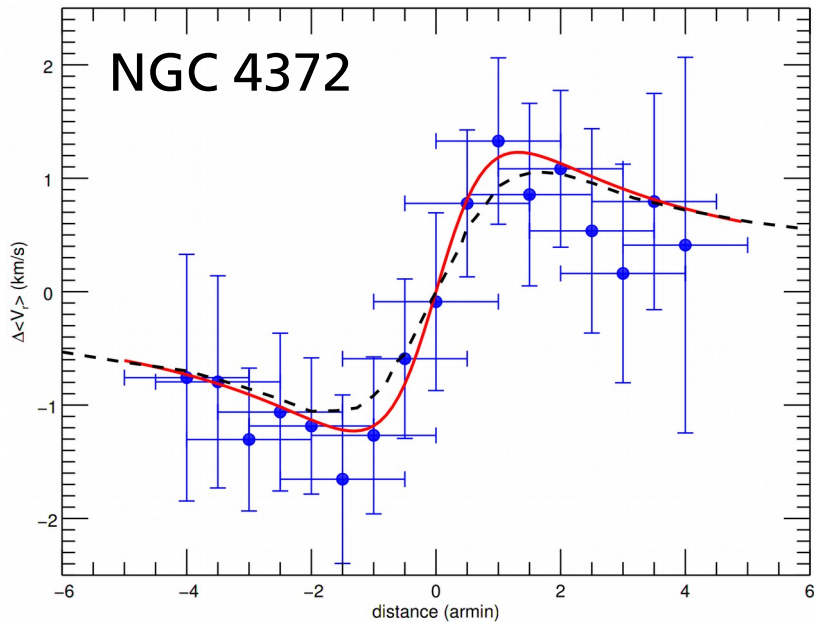

This complexity needs to
be taken into account and
to be treated properly!

WHY IS ROTATION IMPORTANT?

WHY IS ROTATION IMPORTANT?

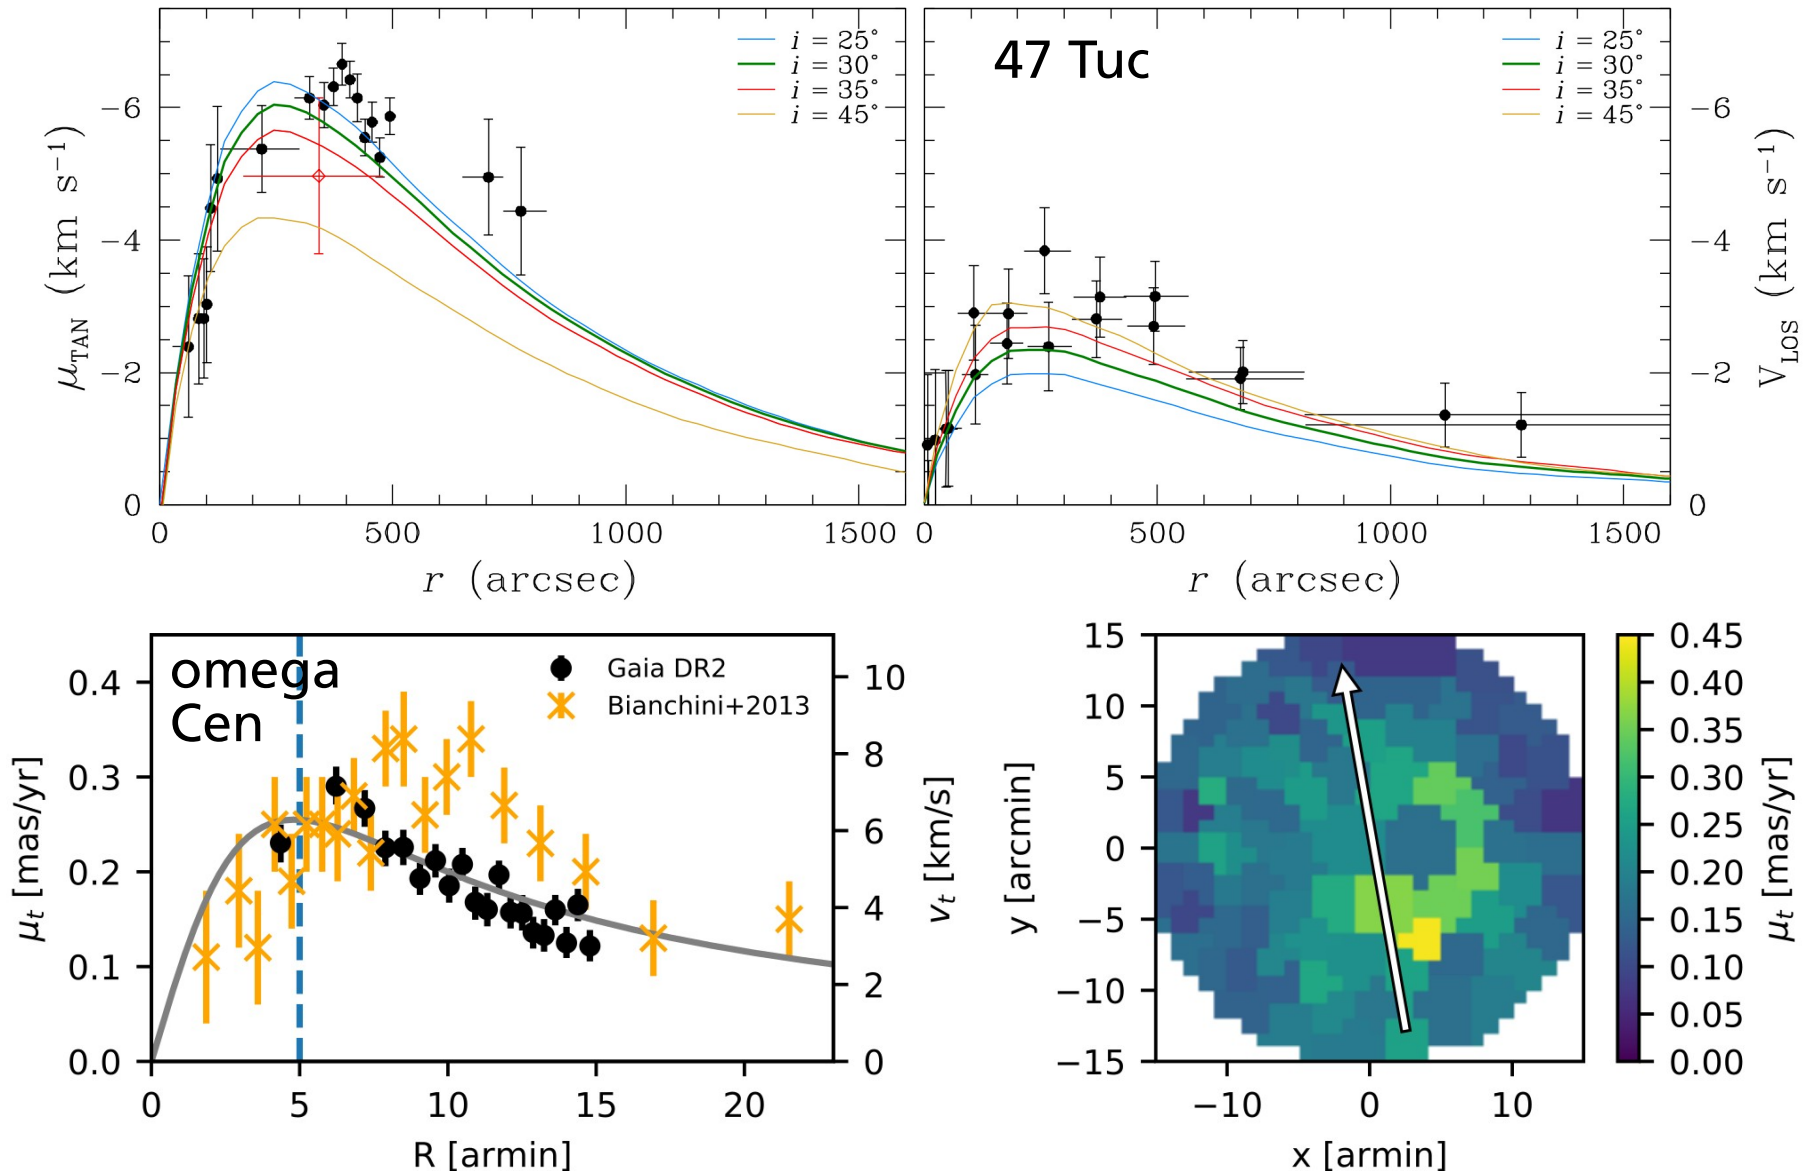

Sollima et al. 2009
 Bianchini, Varri, Bertin, & Zocchi 2012
 Kacharov, Bianchini, et al. 2014

WHY IS ROTATION IMPORTANT?

Also detected with proper motions!

WHY IS ROTATION IMPORTANT?

Also detected with proper motions!

Bellini, Bianchini, Varri, et al. 2017
Bianchini et al. 2018

WHY IS ROTATION IMPORTANT?

Different rotation in different populations?

WHY IS ROTATION IMPORTANT?

Different rotation in different populations?

Cordero et al. 2017
NGC 6205 [M13]

WHY IS ROTATION IMPORTANT?

Possible responsible for globular clusters morphology

WHY IS ROTATION IMPORTANT?

Possible responsible for globular clusters morphology

NGC 5904 [M5]

Stetson et al., to be submitted

Lanzoni et al. (2018)

ROTATING MODELS

ROTATING MODELS

Goals:

→ to characterize rotation

→ to understand its properties with respect to external tidal field and in different evolutionary stages

Bellazzini et al. 2012

ROTATING MODELS

Dynamical models defined from distribution function

- Prendergast & Tomer 1970; Wilson 1975; Jarvis & Freedman 1984; Lagoute & Longaretti 1996; Lupton & Gunn 1987; Einsel & Spurzem 1999; Varri & Bertin 2012

ROTATING MODELS

Dynamical models defined from distribution function

- Prendergast & Tomer 1970; Wilson 1975; Jarvis & Freedman 1984; Lagoute & Longaretti 1996; Lupton & Gunn 1987; Einsel & Spurzem 1999; Varri & Bertin 2012
- Zocchi & Varri, in prep.

$$f(E, J_z) = A E_\gamma \left(g, -\frac{E - \phi(r_t)}{s^2} \right) \exp \left(\frac{\omega J_z}{s^2} \right)$$

$$E_\gamma(g, x) = \frac{\exp(x)\gamma(g, x)}{\Gamma(g)} \quad g > 0$$

$$E_\gamma(g, x) = \exp(x) \quad g = 0$$

$$\hat{\omega} = \frac{\omega}{\sqrt{4\pi G\rho_0}}$$

MAIN PROPERTIES

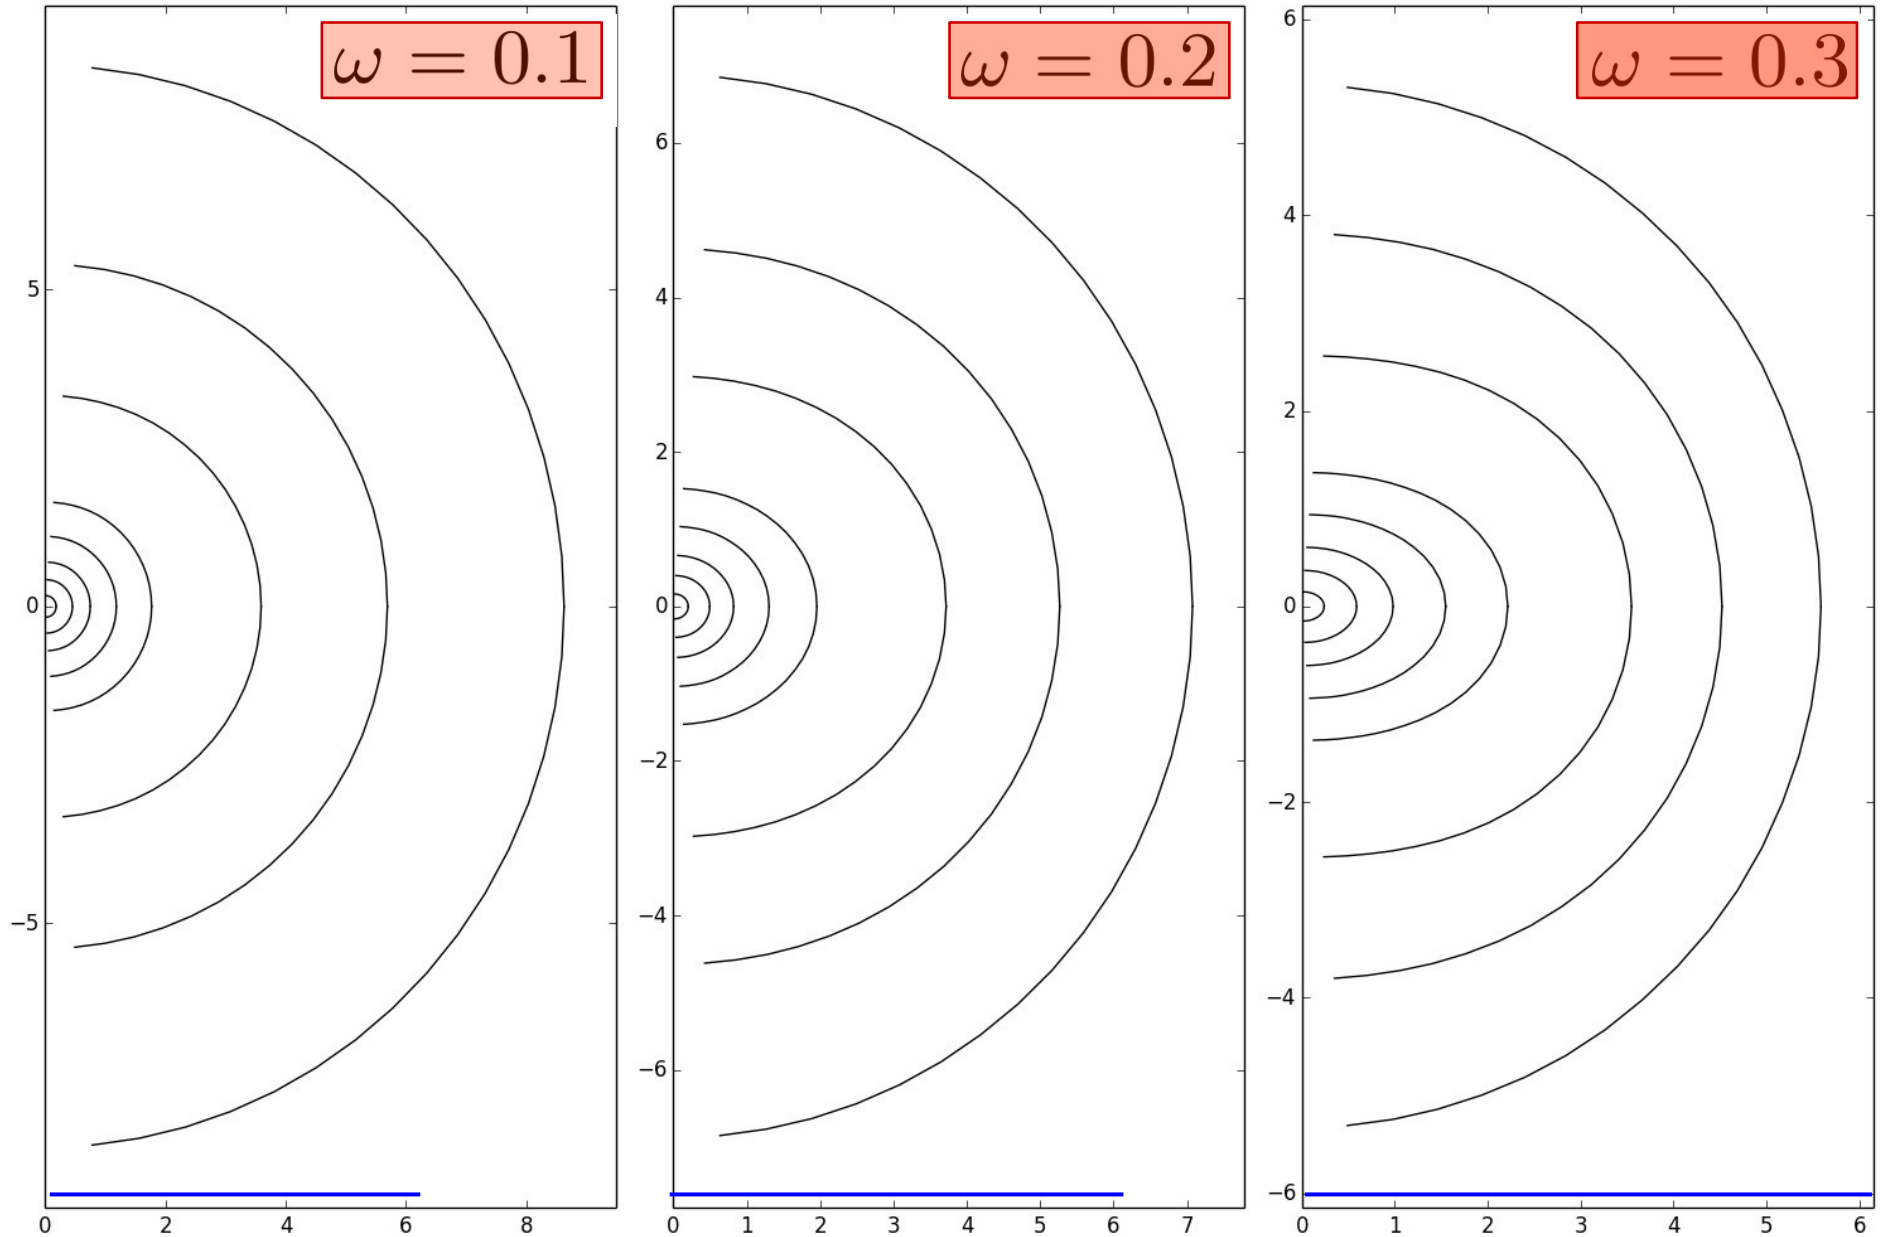

- ◆ The models are axisymmetric, and the **flattening** depends on the rotation strength
- ◆ The **rotation** is differential (solid body behaviour at the centre)
- ◆ The models are **isotropic** at the centre and at the edge, and radially **anisotropic** in the intermediate region

ISODENSITY CONTOURS

ISODENSITY CONTOURS

More flattened 

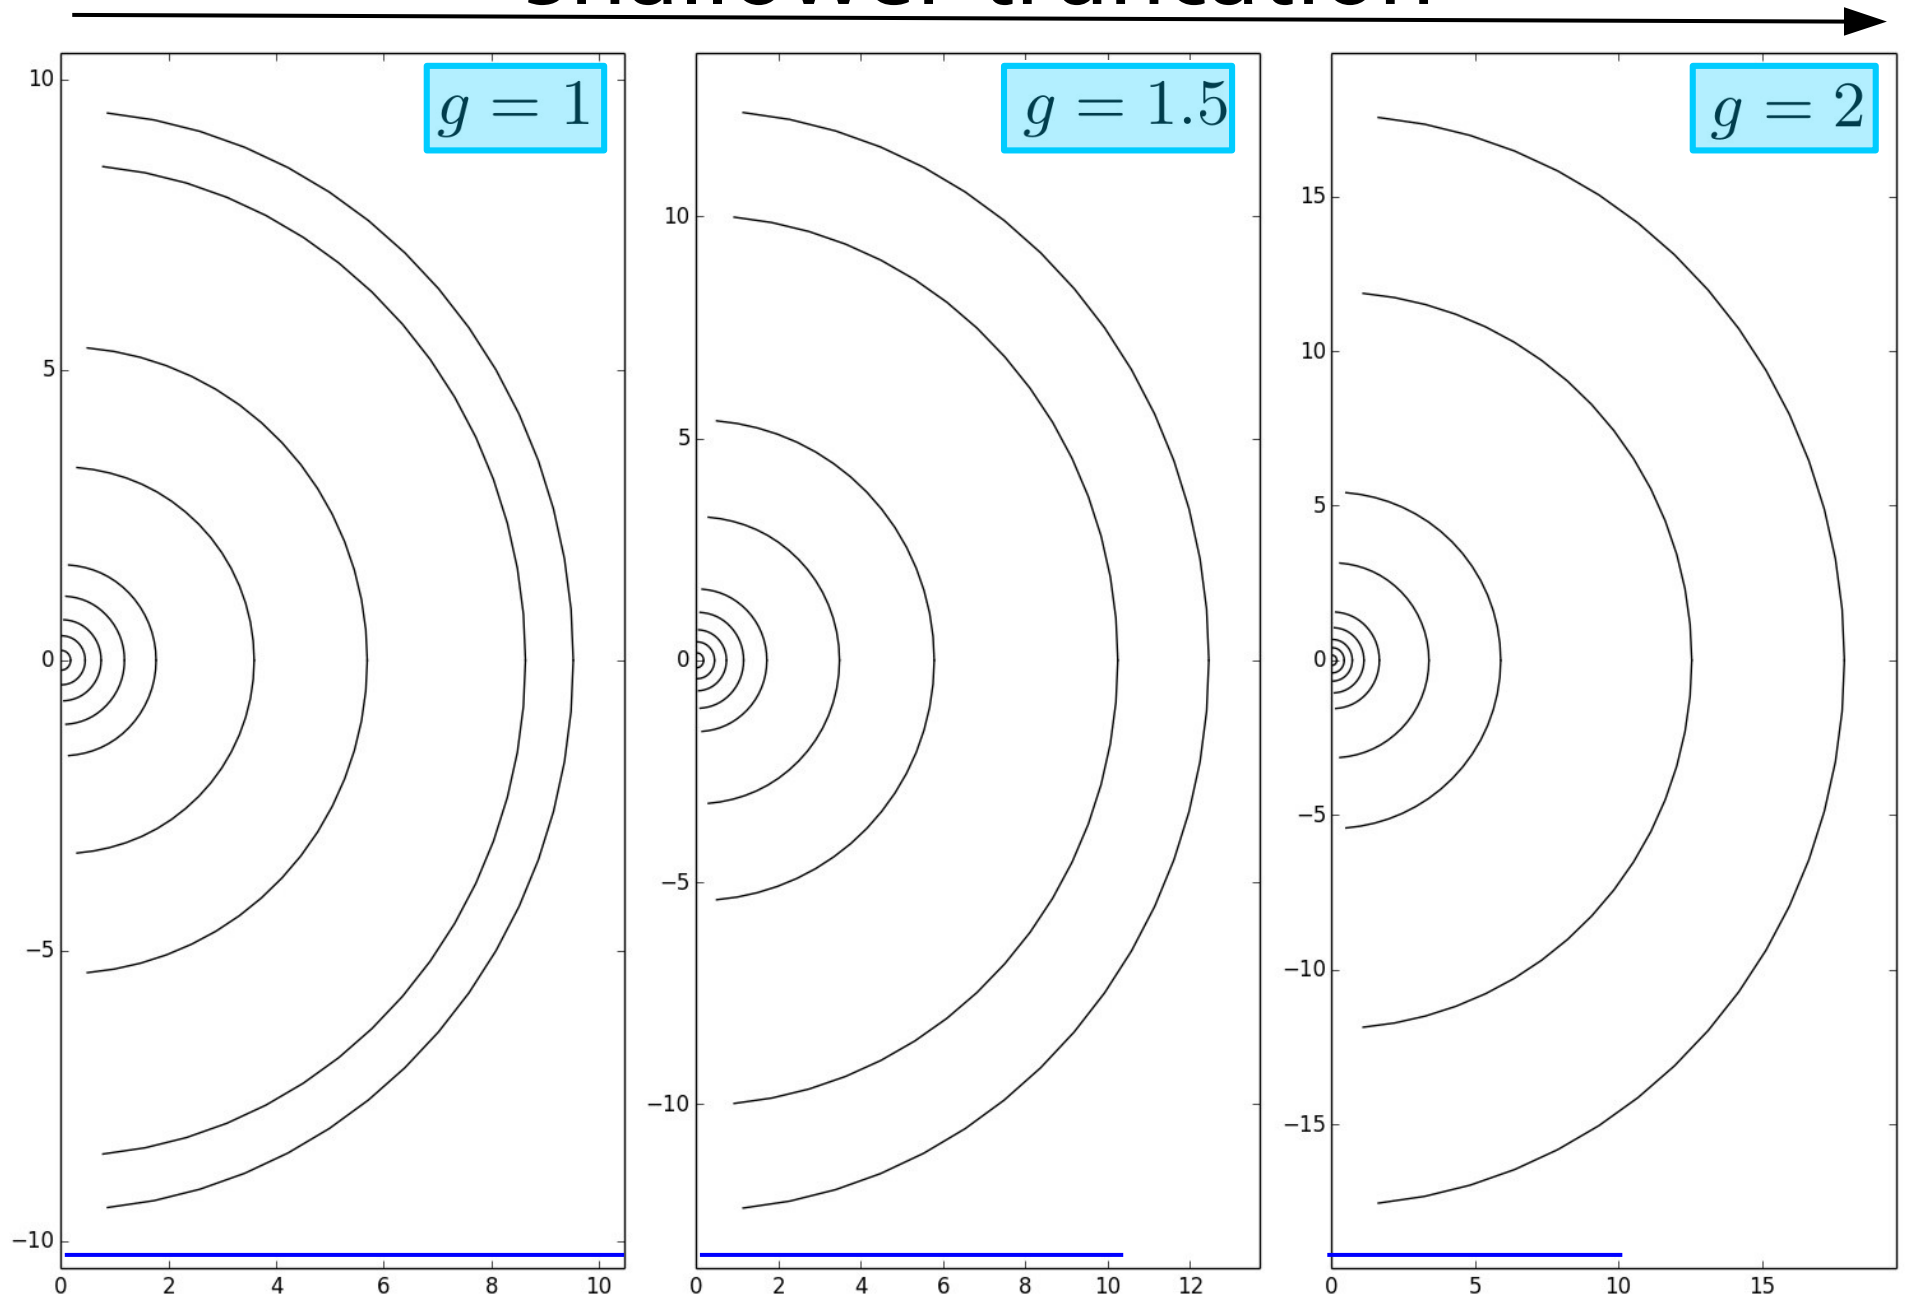

ISODENSITY CONTOURS

More concentrated 

ISODENSITY CONTOURS

Shallower truncation

ELLIPTICITY PROFILE

Clusters!

KINEMATIC PROFILES

Rotation curve

Anisotropy

Peaks are NOT in the same location!

SUMMARY

- ★ Globular clusters are **complex** stellar systems, and this complexity needs to be taken into account and to be treated properly!
- ★ **Rotation** is an interesting dynamical ingredient to explore and characterize, as its property carry information about the past evolution of clusters.
- ★ **NEXT STEP** - Compare models with the data of Galactic globular clusters and determine the property of rotation, anisotropy and tidal effects!

WHY IS GAIA SO IMPORTANT?

WHY IS GAIA SO IMPORTANT?

Coverage of the
entire extent of
stellar clusters

Improved
membership
determination

Phase space
(almost) fully
available!
