

# SciQLop

An overview for the non developers

Alexis Jeandet<sup>1</sup>, Nicolas Aunai<sup>1</sup>, Benjamin Renard<sup>2</sup>, Myriam Bouchemit<sup>2</sup>, Nicolas André<sup>2</sup>, Vincent Génot<sup>2</sup>, Christian Jacquey<sup>2</sup>

# SciQLop brief description

- Cross platform desktop application
- C++/Python
- Fast (in-situ) time series visualisation tool
- An event catalog browsing and editing tool
- An highly customizable visualisation tool
  - Jupyterlab built-in
  - Workspaces to isolate specific studies
  - Plots any python function that takes a time range and returns a time serie

# Plots python functions ( $f(start, stop)$ ) so what?

As long as you can write some basic python code you can:

- Visualize any data from any file format from any source
- Visualize any computed quantity (remember Speasy slides)

```
def mms1_cos_theta_vb(start, stop):
    B,V=spz.get_data([
        spz.inventories.tree.cda.MMS.MMS1.FGM.MMS1_FGM_BRST_L2.mms1_fgm_b_gse_brst_l2_clean,
        spz.inventories.tree.cda.MMS.MMS1.DIS.MMS1_FPI_BRST_L2_DIS_MOMS.mms1_dis_bulkv_gse_brst
    ], start, stop)

    B = B['Bx GSE', 'By GSE', 'Bz GSE']
    V = interpolate(B,V)
    cos_theta_vb = np.einsum('ij, ij->i', V, B)
        /((np.linalg.norm(B, axis=1)*np.linalg.norm(V, axis=1))

    return cos_theta_vb
```

- Build complex data pipelines and visualize the output
- Setup a custom visualisation panel

# Catalogues visualisation and edition

SciQLop was developed to make possible large statistical studies which implies:

- Being able to **quickly** create a big enough test and train sets for ML algorithms
- Being able to **quickly** browse thousand of detected events
- Being able to **quickly** label manually enough data for the study if ML doesn't work
- Being able to share catalogues

Workspace Manager Logs

# First SciQLop workshop in 2024 (Workshlop!)

- Two days event with presentation and hands on
- 26 in person participants, interns, PHD students, Scientists and emeritus!
- Now SciQLop ships with tutorials
- A lot of feedbacks (big backlog)
- Request for new Workshlops

# First SciQLop workshop in 2024 (Workshlop!)

# SciQLop future

- Workshlop™ at next MMS community workshop in Paris
- Plugins and workspaces “app store” like interface
  - Grading system based on peer review
- A central collaboration tool for our community?
- Used to validate instrument calibration updates in our lab
- Real time collaborative catalog editing (PyCRDT like JupyterLab)
- Used for SITL in future missions?
