

IHDEA

2024 MEETING

CDPP / CNES HIGHLIGHTS

Danièle Boucon

HISTORY AND CONTEXT (REMINDER)

CDPP* activities are "historically" split into two connected activities

- Long Term preservation, under CNES responsibility
- Scientific valorization, under CNRS/INSU responsibility

➤ 2 separated databases

- The CDPP archive in CNES
- The AMDA tool database in IRAP

➤ 2 different data models “historically” created

- The "CDPP model" for the archive
- The "AMDA model"

➤ Limited consistency → Now both models are SPASE compliant. Still limited interfaces and possibilities for sophisticated interactions

* More information on CDPP server <https://www.cdpp.eu/>

GOALS

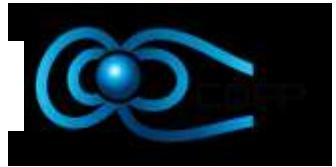

Need to

- Standardization and coherence of CDPP data models
 - Be compliant to community standards
 - Use the same model for all the CDPP tools
- Coordinated actions between CNES and IRAP to achieve:
 - Better usability
 - Better interaction/integration between CDPP tools
 - Offer new possibilities

As examples :

 - * Using archive data directly in CDPP scientific tools
 - * Offer a unified access to the two databases (common tree, common search criteria...)

ARCHIVE MAIN ACTIVITIES SINCE LAST IHDEA MEETING 1/2

- REGARDS new archiving system (replacing SIPAD) opened beginning of 2024
 - the data catalog has been completely reviewed to propose SPASE compliant metadata
 - Data model conforms to SPASE 2.4.0 (should be compliant with 2.6.2)
 - the HMI has been redesigned
 - better data search and command performance
 - Same link to access the CDPP archive : <https://cdpp-archive.cnes.fr>
You'll have to recreate an account.
If you have some problems, support address: l-cdpp_support@cnes.fr
- This closes a huge migration phase (data, documents, new data model, new ingestion chains...) -> about 4 years

CNES Data Archive for CDPP

General presentation

Missions and products

About

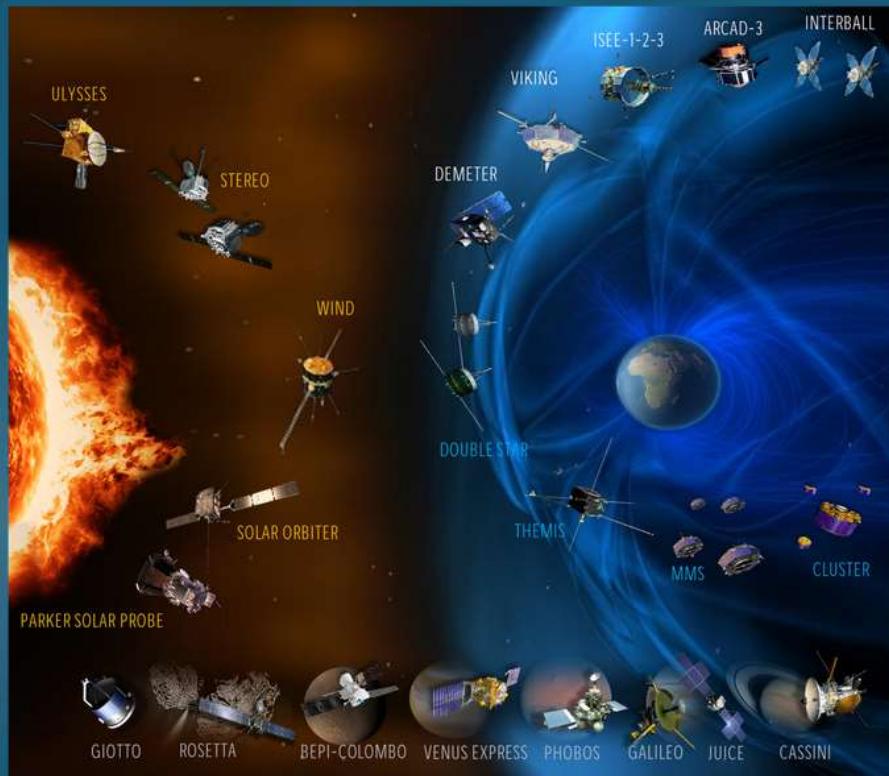

The CDPP is the french plasma physics data center. Created in 1998 by CNES and CNRS.

It assures the long term preservation of data obtained primarily from instruments built using French resources, and renders them readily accessible and exploitable by the international community.

The CNRS is responsible for the scientific component which is hosted at IRAP with the collaboration of Observatoire de Paris.

This site represents the archive of data hosted at CNES, which is responsible for their long-term preservation.

For more information please contact [Support](#).

Data access

Data available here are public but to order data you need to be registered ([see user guide](#)).

Please acknowledge the CDPP and the PI of the data if you use it in a publication, ...for more details read the [template](#).

Other links & News

CDPP CNES archive data is opened since 2023.

Useful links : the main site of [CDPP](#).

The latter provides users with a number of tools such as : [AMDA](#), [3DView](#), [Propagation tool](#), [spaceweather tool](#) and [Treps](#).

Missions & products

This archive, produced by French funding experiments. Then an overview of each mission is given experiments used to produce these data. Note that descriptive documents of the mission and associated via the search tool.

is about the mission or associated data, users can follow links to other websites we give here.

Archive's products

We provide access to scientific data. We also provide ancillary data (orthography and attitude data, the and the science data, ground data).

various thematic: Earth magnetosphere studies, ionospheres studies, solar wind missions, planetology

es access to different resources associated to the data as the descriptions and the scientific or technical archive also offers access to some software libraries.

is data catalog, view quicklooks or use search criteria. But to order data or download documents, the more details see the User guide.

Description

ARCHIVE ROADMAP

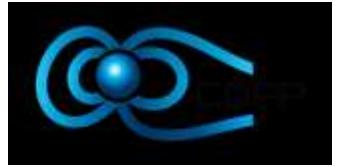

➤ 1st phase (from now)

- Moving to a new long term storage system: data migration, old data analysis -> end of 2025
- Integration of new missions (short term MAVEN and Solar Orbiter, mid and long term JUICE and BEPI COLOMBO)

➤ 2nd phase (from 2025)

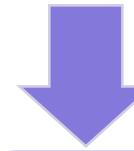

- REGARDS will continue to evolve (scientific community feedback...)
- Integration with CDPP valorization tools will be reinforced
 - Visualization and command of the AMDA data through the Archive/REGARDS data tree
Common search with common criteria (ex. search all Cassini data in both databases)
 - Archive data in the new storage infrastructure will be accessible by the CDPP tools (webservices, OV protocols)

ARCHIVE ROADMAP

2024 and 2025: old data analysis, data migration

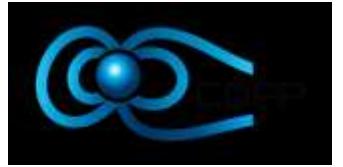

Integration of **new missions**

end 2025:
new long
term storage
system

From 2025:
REGARDS + CDPP valorization tools **reinforced**
